

GDP: Preliminary Estimate for 2023Q2, and Outlook for 2023-24

August 18, 2023 For the second quarter of 2023, Taiwan's real gross domestic product (GDP) increased by 1.36% from the same period of previous year according to the latest preliminary estimate, and the growth rate of 2023Q1 has been revised to -3.31%. Furthermore, the real GDP is predicted to grow 1.61% and 3.32% in 2023 and 2024, respectively.

Preliminary Estimate of Real GDP in 2023Q2

The real GDP grew by 5.62% on a quarter-on-quarter, seasonally-adjusted annualized basis (saar) and 1.36% on a year-on-year basis (yoy, all growth rates hereafter are on the same basis) in 2023Q2, 0.09 percentage point lower than the advance estimate.

Meanwhile, the economic growth rate of 2023Q1 has been revised to -3.31% (formerly -2.87%).

On the demand side, real private final consumption expanded by 12.56% in 2023Q2, mainly driven by the extended recovery of expenditures on services such as dining out, accommodation, recreation, transportation, as well as consumption on vehicles and the flourishing outbound tourism.

Regarding gross capital formation, investment in transportation equipment grew significantly. However, investment in construction, machinery equipment and intellectual property decreased. Combining the reduction of inventory, real gross capital formation declined by 13.44%.

In addition, real exports of goods and services dropped by 7.03%, mainly dragged by the weak global demand and prolonged inventory adjustments. Imports also fell by 7.84%.

On the production side, the manufacturing sector decreased by 10.13% in 2023Q2, following the 12.38% decrease in the previous quarter, mainly due to the weak market demand for semiconductor, chemical material, basic metal, fabricated metal products, and machinery & equipment.

The wholesale and retail trade sector increased by 0.91%, with the decrease in wholesale offsetting the increase in retail.

The transportation and storage sector grew by 35.83% in 2023Q2, due to the

growing number of passengers taking land and air transport.

The financial and insurance sector increased by 2.85% in 2023Q2, following the 4.39% decline in the previous quarter.

Forecast for 2023

Global economic growth is projected to slow down due to the demand crunch caused by the inflation, tightening monetary policies and the slow economic recovery in China. Besides, the consumer spending has shifted from goods to services after the pandemic and the prolonged inventory reduction policies exacerbated dampening final demand. According to International Monetary Fund (IMF), the dragged momentum of global demand is indicated by the world trade volume projected to grow by 2.0%. However, the continued recovery of International tourism inflows would drive travel revenue. In aggregate with services exports, real exports of goods and services will shrink by 1.74% in 2023.

Real private consumption will grow by 7.94%. The consumption picks up after the pandemic along with strong gains in shopping, recreation, and dining out. The growth also benefits from the flourishing out-bound tourism owing to the reopening of borders, the stabilizing labor market, the government's universal cash remittance since April and pandemic-related insurance payouts.

The continuing investment of airline companies to expand aircraft fleets to cope with the increase in overseas travel. However, enterprises' capital expenditure tend to stay cautious due to the uncertainty toward global outlook and the effect of previous year's high base. Real private fixed capital formation will decrease by 5.93%.

Combining the above components as well as the public sector, Taiwan's real GDP is projected to grow by 1.61% in 2023, revised downward by 0.43 percentage point from the previous forecast.

Consumer price Index (CPI) will increase 2.14%, revised downward by 0.12 percentage point, mainly reflecting the falling raw material prices and the rise in housing rental, food away from home and entertainment expenses due to the increased demand.

Outlook for 2024

The global economy will grow mildly and the world trade volume is projected to grow by 3.7 in 2024 according to IMF. However, the domestic capacity expansion of the advanced capacity of leading semiconductor manufacturers cope with new wave of AI applications, as well as sustaining investment in solar and offshore wind energy, all support Taiwan's export and investment growth. Combining the contribution from domestic sector, with the recovering consumption toward regular growing course, real GDP will grow by 3.32% in 2024. CPI will gently rise by 1.58%.

Explanation:1. (p) indicates preliminary version, (f) indicates forecast, (r) indicates revised version. These marks mean the same in all tables.

2. The sum of the decomposed items might not be equal to the total due to the rounding of decimals.

3. yoy (year on year) means the growth rates to the correspondent quarter of previous year, saqr (seasonally adjusted quarterly growth rate) means the growth rate of seasonally adjusted value compared to the previous quarter, saar (seasonally adjusted annualized rate) means the annualized growth rate of seasonally adjusted value compared to the previous quarter ; $saar=(1+saqr)^4-1$.

Explanation: Contributions of component X on s season at t year= $\{PX_{t-1}/P_{GDP_{t-1}} \times (rX_{t,s} - rX_{t-1,s})/rGDP_{t-1,s} + (rX_{t-1,s}/rGDP_{t-1,s} - rX_{t-1}/rGDP_{t-1}) \times (PX_{t-1}/P_{GDP_{t-1}} - PX_{t-2}/P_{GDP_{t-2}}) \} \times 100\%$,
where rX : Chained dollar of component X ; rGDP : real GDP(reference year = 2016) ; PX : Deflators of component X ; P_{GDP} : Deflators of GDP.

Explanation: Contributions of component X on s season at t year= $\{P_{X,t-1}/P_{GDP,t-1} \times (rX_{t,s} - rX_{t-1,s})/rGDP_{t-1,s} + (rX_{t-1,s}/rGDP_{t-1,s} - rX_{t-1}/rGDP_{t-1}) \times (P_{X,t-1}/P_{GDP,t-1} - P_{X,t-2}/P_{GDP,t-2})\} \times 100\%$, where rX : Chained dollar of component X ; rGDP : real GDP(reference year = 2016) ; P_x : Deflators of component X ; P_{GDP} : Deflators of GDP.

Note: (1) Real Estate and Ownership of Dwellings consists of real estate development, operation, related activities and dwellings services. The dwellings services (including those rental and owner-occupied imputed) accounted for over 80% of total real estate and dwellings services.

(2) Include accommodation and food services, professional, scientific and technical services, support services, education, human health and social work services, arts, entertainment and recreation, other services, import duties and value-added tax.

Explanation: 1. Gross National Savings(A)=GDP+Net Factor Income from the Rest of the World(E)+Net Transfers from the Rest of the World(F)-Private Final Consumption-Government Final Consumption.

2. Gross Domestic Investment(B)=Gross Fixed Capital Formation+Changes in Inventories.

3. Difference between Savings and Investment(C)=A-B=(GDP+E+F-Private Final Consumption-Government Final Consumption)-(Gross Fixed Capital Formation+Changes in Inventories)=(Exports of Goods and Services-Imports of Goods and Services)+E+F=External Balance of Goods and Services+Net Factor Income from the Rest of the World+Net Transfers from the Rest of the World. In practice, statistical discrepancy could exist between C and D+E+F, because of the difference between the GDP results derived from production and expenditures.

4. The difference between the current account balance of national income (NI) and the balance of payments is mainly due to the measures of merchanting.

Note: 1.yoy (year on year) means the growth rates to the correspondent quarter of previous year; saar (seasonally adjusted annualized rate) means the annualized growth rate of seasonally adjusted value compared to the previous quarter.

2.*Chained dollars at seasonally adjusted annual rates (yoy). Since 2020, the economic growth rate of the European Union has reflected the current membership of 27 economies due to the United Kingdom withdrawal from the European Union .

Explanation : 1. Per capita income is calculated as the ratio of per capita income of first quintile to per capita income of fifth quintile. All the population ranked in ascending order of per capita income is divided in to five quintiles. Per capita income is calculated as household income divided by household size(or the square root of household size) .
 2. The figures of income inequality measured by per capita income is lower than per household income.

Table 13 The Change of Disposable Income per Household Occurred by Current Transfers between Households and Government

Unit:NT\$,%

Year	Household Income Without Current Transfer From Government		Household Current Transfer Income From Government	Household Income Including Current Transefer Income From Government		Household With Current Transfers Income to Government		Disposable Income			Ratio Difference					
	Amount		Ratio A	Amount		Amount (3)=(1)+(2)		Ratio B	Amount		Amount (3)-(4)		Ratio C	With Current Transfer From Government	With Current Transfers to Government	With Current Transfers
	Lowest 20%	Highest 20%		Lowest 20%	Highest 20%	Lowest 20%	Highest 20%		Lowest 20%	Highest 20%	Lowest 20%	Highest 20%

Explanation: The higher Gini's concentration coefficient, the more serious the inequality of income distribution.

Note: The data presents official releases of above countries. The comparison should be made cautiously for the difference of income definition. For example, Taiwan is disposable income from all households. U.S. (a) is income from all households after accounting for government cash benefits and taxes, the year of 2007 and before is including capital gains and non-cash transfers, the years of 2008 and 2009 is excluding capital gains. U.S. (b) is income before tax including government cash transfers, but excluding capital gains and non-cash transfers. Japan (a) is yearly income (before tax), and not incorporated with farm households till 1999, not with single households till 2002, Japan (b) is equivalised per capita disposable income for all households. South Korea (a) is per capita disposable income for the urban area households (1-person households and farm households are excluded), South Korea (b) is per capita disposable income for all households (farm households are excluded), South Korea (c) is per capita disposable income for all households. Singapore (a) for all households, Singapore (b) and (c) for employed households, all including income from work, (a) and (b) are before accounting for government benefits and taxes, hence having higher ratios and coefficient, (c) is after that. The data of Hong Kong (a) compute on post-tax household income and publish the report every five years. The gini's concentration coefficient of the item income has not published since 2021. The the data of Hong Kong (b) is Post-tax post-social transfer household income.

Source: Japan: (a) Family income and expenditure survey, (b) for the year of 2004、2009、2014 is National Survey of Family Income and Expenditure, 2019 is National Survey of Family Income, Consumption and Wealth. South Korea: (a) (b) Annual Report on the Household Income and Expenditure Survey, (c) Survey of Household Finances and Living Conditions. U.S.: is from Current Population Survey Annual Social and Economic Supplements (CPS ASEC), (a) "Effects of Taxes and Transfers on Income and Poverty", (b) "Income, Poverty, and Health Insurance Coverage in the United States". Singapore: (a) General Household Survey, (b) (c) Data for the year of 2000 and 2010 and 2020 is from the Census of Population; for the year of 2005 is from General Household Survey; for the year of 2001-2004、2006-2009、2011-2019、2021-2022 is from Labour Force Survey. Hong Kong: 2021 Population By-census, Thematic Report: Household Income Distribution in HK.

Explanation : 1 pin ≡ 3.31 square meters.

Note : ① Concerning housing tenure, before 2010, the term "self-owned" means owned by household members and their lineal relatives. From 2010, the meaning is amended to owned by household members who usually live in this house in accordance with the definition of 2010 Population and Housing Census.

Table 16 Government Social Transfers In Kind Effect on Income Distribution, by Income Quintile

Year	Disposable income				Government social transfers in kind			Household income after government social transfers in kind				Government social transfers in kind effect A-B
	Average household income (NT\$)			Ratio of 1st quintile to 5th quintile (A)	Average household income (NT\$)			Average household income (NT\$)			Ratio of 1st quintile to 5th quintile (B)	
	All households	1st quintile	5th quintile		All households	1st quintile	5th quintile	All households	1st quintile	5th quintile
