前　　言

PREFACE

前　　言

「生產力」觀念係由 18 世紀經濟學者奎內（F. Quesnay）所提出，在二次大戰後才普遍受到重視。當年在美國推動下的馬歇爾計劃，實際上就是如何提高生產力的計劃，透過此一計劃使得西歐在短短數年間，便從戰爭的廢墟中重建起來可見生產力提高的重要性。

「生產力」在經濟學的概念為產出與投入的比率；而生產力的提高，即意謂以相同的投入生產較多的產出，或同樣的產出使用較少的投入。不過，提高生產力的真諦，並非完全在於減少投入，相反的，應該是在於增加產出，或提高產出之品質，以創造就業機會、增進社會福利及提升全民福祉。

我國自民國 44 年推行生產力運動以來，由於政府與民間的共同努力，雖在地狹人稠，資源貧乏的限制下，仍能積極促進企業生產力之提高，使得商品生產成本降低，就業市場活絡，出口能力增強，工商企業乃蓬勃發展，創造了舉世欽羨的經濟奇蹟，而躋身為新興工業化國家之林。

展望未來對外貿易仍為我國經濟發展之命脈，而面臨國際間日益劇烈的挑戰，充分且有效地運用各項有限資源，乃為致勝關鍵之所繫，換言之，惟有不斷加速生產力的提升，方能於現今國際競賽中脫穎而出。

生產力的重要性已廣為大眾所接納，惟生產力有否提升，則必需經由生產力統計指標的測定方能確認，而這正是為一般人所忽略。本總處有鑑於此，自民國 61 年 7 月起採用「工業生產指數除以受僱者投入工時指數」的方法，按月編製製造業及水電燃氣業的勞動生產力指數，以供政府制訂勞工、產業政策、學術界從事學術研究、產業界從事決策運用之參考，然因限於產出資料的取得，故涵蓋業別範圍未盡周延，致陳示全國總勞動生產力及產業間勞動生產力之差異性，則付之闕如，為改進此一缺憾，本總處特從 75 年起採用國內生產毛額（GDP）與就業者投入工時配合的觀念，編製全國各產業之產值勞動生產力，其較原方法改進之處如下：

1. 行業範圍較為周延，亦即涵蓋全國 16 大行業。
2. 投入範圍擴大至全體就業者，而不僅止於受僱者。

3.由於附加價值率的變動，使得產出的衡量較為正確。

其目的在於正確反映我國勞動生產力之變動趨勢，指出未來資源流向及利用方式，惟受到時間與人力所限，報告中若有疏漏之處，尚祈各界多予指正，以使本報告更臻完美。

Preface

The concept of “productivity” was first put forth by F. Quesnay, an 18th century economist, but it had not received widespread attention until the World War II ended. In fact, the Marshall Plan launched by the United States at that time was a program designed to raise productivity. The plan which helped rebuild the Western Europe on the war-torn ruins in just a few years has demonstrated the importance of raising productivity.

Economically, “productivity” is a ratio between output and input. Producing can do raising productivity more output without increasing input or by cutting input without reducing output. In reality, raising productivity should not lie in cutting input. Instead, it should rest on increasing output or upgrading quality in order to create employment opportunity and enhance social welfare and well-being of the people.

Since the first campaign to enhance productivity in this country was launched in 1955. Due to the government and the private sector have closely worked together, as a result, despite heavy population living on a piece of very limited land and despite scarcity of resources, the program has made a great contribution to improvement of productivity, lowering production cost, activating reemployment market, sharpening this country’s competitive edge in the export market, and leading to quick industrial and commercial development. This program, among other things, has created an economic miracle renowned in the world and sent this country to become one of the newly industrialized nations.

The prospect for the future is that external trade will remain to be a backbone to this country’s economic development. As a challenge facing this country arising from competition in international market is getting stronger, how to maximize utilization of resources is a key point for the future efforts to score victory in the contest. In other words, the only way to lead an international race in the modern times is to constantly raise productivity without interruption.

The importance of productivity has already been widely recognized. To determine whether the productivity is lifted or not should rely on a statistical indicator to measure it, but the measurement and the indicator have very often been neglected. In view of this point, the Directorate-general of Budget, Accounting and Statistics

(DGBAS) began to prepare labor productivity indices for Manufacturing and Electricity, gas & water industries in July of 1972. The productivity was calculated by “dividing input of total work hours into industrial production index.” The productivity indices have been used as a reference by government in its manipulating labor and industrial policies, by academic circles in their research and study, and by businessmen in their management. As the availability of output data is limited, the productivity indices did not cover all industries, resulting in lack of labor productivity indicators for the entire economy and for all individual industries. Comparison of labor productivity between industries was impossible. To correct the shortcoming, the DGBAS adopted a new concept to calculate the labor productivity statistics in 1986. Specifically, gross domestic product (GDP), instead of industrial production index, is compared with input of work hours. The new method has three advantages over the old one; they are as follows:

1. Scope is expanded. Now all of the 16 major industries in this country are included.
2. Coverage of input is broadened to include the entire employment, instead of just employed workers.
3. With the rate of change in value-added increment being available, output can be more correctly measured.

The change in calculation method is primarily designed to reflect the accurate trend of labor productivity over a series of time in order to indicate flow and utilization of resources and to project the trend to go in the future. However, due to limitation in time and manpower available, there may be mistakes and omissions overseen and thus contained in this report. We would appreciate your correction and advice in a hope to make the report become better in the future.

貳、提要分析

II. SUMMARY ANALYSIS

提 要 分 析

對國內產業發展而言，提升勞動生產力不僅可促進經濟持續成長，並有助於穩定物價、降低生產成本，以及提升薪資水準。鑑於產業在經營及生產活動過程中，最主要之投入要素為勞動與資本二項，因此研究國內產業之勞動生產力變動趨勢，可了解產出與勞動投入之間的消長關係，亦有助於剖析勞動生產力受資本密集度與技術進步率之影響。

有關產業勞動生產力之研析，係衡量每單位勞動投入所獲得之產出，通常以（總產出／總勞動投入）表示，可作為各產業勞動投入使用效率，以及潛在經濟生產量之指標，其中總產出以「實質國內生產毛額」^{註1}衡量，即以產值概念來計算，總勞動投入則以「就業投入總工時」衡量。

此外，研究產業之單位產出勞動成本，係衡量每單位生產所付出之勞動成本，通常以（總勞動成本／總產出）表示，可視為產業投入成本競爭力之指標，其中總勞動成本以「就業者總薪資」衡量，總產出亦採「實質國內生產毛額」。

為觀察國內產業之勞動生產力與單位產出勞動成本變動趨勢，茲根據前述說明，將二者之涵義以公式表示如下：

- (1) 產值勞動生產力（以下簡稱勞動生產力）= 實質國內生產毛額／就業投入
總工時
- (2) 單位產出勞動成本 = 就業者總薪資／實質國內生產毛額
由(1)與(2)之關係導出
- (3) 單位產出勞動成本 = (就業者總薪資／就業投入總工時)／
(實質國內生產毛額／就業投入總工時)
= 平均每工時薪資／勞動生產力

對產業經營而言，單位產出勞動成本變動情形係觀察產業競爭力之重要指標，故由(3)即可顯示，欲降低勞動成本以提升產業競爭力，主要須藉由提高勞動生產力以達成目標。

^{註1} 本報告全體產業實質國內生產毛額，係以 100 年為參考年之國內生產毛額連鎖實質值計算，其涵蓋範圍不含住宅服務、公共行政及國防；強制性社會安全、加值型營業稅、進口稅及統計差異，計算方式詳後附「編製方法說明」。

全體產業

我國以貿易立國，整體經濟表現深受全球經濟情勢影響，104 年因全球景氣走緩，國際市場需求疲軟，致我國出口較上(103)年大幅衰退 10.9%，國內產業連帶受到衝擊，製造業生產減少，內需成長動能不足，全年經濟成長率僅 0.65%，創 98 年金融海嘯以來之新低，較上年下降 3.27 個百分點。

104 年國內全體產業實質生產毛額較上年衰退 0.26%，高於就業投入總工時減幅 0.17%，致勞動生產力較上年下降 0.09%。

單位產出勞動成本方面，因平均每工時薪資較上年上升 3.63%，而勞動生產力下降 0.09%，致全體產業單位產出勞動成本較上年上升 3.73%。

(一) 農林漁牧業

104 年我國因缺水，實施農業限水措施，農作種植面積減少，又逢蘇迪勒及杜鵑颱風侵襲，農業受害嚴重，另家禽受年初禽流感疫情影響，產量亦減，致全年農林漁牧業實質 GDP 衰退 3.88%，而就業投入總工時增加 2.26%，致勞動生產力較上年下降 6.00%。若以單位產出勞動成本觀之，受全年平均每工時薪資上升 1.19%，及勞動生產力下降 6.00%雙重影響，較上年上升 7.66%。

(二) 工業

104 年受全球經濟整體表現不佳，國際需求疲軟，電子產品庫存去化持續，及中國大陸供應鏈自主化排擠效應影響，國內生產成長動能不足，全年工業部門實質 GDP 負成長 0.86%，低於就業投入總工時減幅 0.96%，致勞動生產力較上年上升 0.10%。另因平均每工時薪資成長 4.53%，高於勞動生產力增幅 0.10%影響，致單位產出勞動成本較上年上升 4.43%。

就各大行業勞動生產力觀察，各大業實質 GDP 均呈負成長，其中製造業、用水供應及污染整治業因實質 GDP 減幅低於就業投入總工時減幅，致勞動生產力較上年上升，其餘各業別均呈下降。用水供應及污染整治業實質 GDP 負成長 1.09%，低於就業投入總工時減幅 2.40%，致勞動生產力上升 1.35%居首；製造業之鋼品、手持行動裝置、電子零組件等，因國際競爭及外銷接單減緩而減產，致實質 GDP 負成長 0.52%，低於就業投入總工時減幅 1.03%，致勞動生產力上升 0.53%居次；另天然氣及石油因原油等原物料價格下跌產值減少，致礦業及土石採取業實質 GDP 較上年負成長 6.44%，但就業投入總工時增加 2.79%，致勞動生產力下降 8.98%最多；電力及燃氣供應業因部分機組除役及為減少空污，以天然氣及燃油發電取代，發電成本增加，致實

質 GDP 負成長 6.97%，惟就業投入總工時增加 1.98%，致勞動生產力下降 8.77%居次；營造業因房市降溫，營建工程投資動能疲弱，致實質 GDP 負成長 1.03%，高於就業投入總工時減幅 0.69%，致勞動生產力下降 0.33%。

就單位產出勞動成本觀察，除用水供應及污染整治業因平均每工時薪資成長 0.94%，低於勞動生產力增幅 1.35%，致單位產出勞動成本較上年下降 0.40%外，其餘各業均較上年上升，其中電力及燃氣供應業因勞動生產力下降 8.77%，而平均每工時薪資成長 2.78%，致單位產出勞動成本上升 12.67%最為顯著；礦業及土石採取業因勞動生產力下降 8.98%，高於平均每工時薪資減幅 0.22%，致單位產出勞動成本上升 9.62%次之。

(三) 服務業

104 年雖因全球經濟成長動能疲弱，影響部分產業表現，惟受惠於金融及保險業表現良好、資訊科技應用發展需求之挹注，及來台旅客人數創歷年新高，舒緩經濟景氣波動之衝擊，服務業部門全年實質 GDP 成長 0.39%，高於就業投入總工時增幅 0.19%，致勞動生產力較上年上升 0.19%。另因平均每工時薪資年增 3.21%，高於勞動生產力之增幅 0.19%，致單位產出勞動成本上升 3.01%。

就各大行業勞動生產力觀察，金融及保險業在金融機構手續費及壽險保費等收入增加下，實質 GDP 成長 3.54%，而就業投入總工時減少 0.91%，致勞動生產力上升 4.49%表現最佳；支援服務業因實質 GDP 成長 3.74%，高於就業投入總工時增幅 1.35%，致勞動生產力上升 2.35%表現次之。專業、科學及技術服務業因實質 GDP 負成長 2.80%，而就業投入總工時增加 0.58%，致勞動生產力下降 3.36%減幅最大；不動產業因房市景氣不佳，實質 GDP 負成長 2.55%，而就業投入總工時增加 0.26%，致勞動生產力下降 2.80%居次。

若由單位產出勞動成本觀察，除不動產業外，各業平均每工時薪資均較上年上升，專業、科學及技術服務業受每工時薪資較上年上升 3.34%，及勞動生產力下降 3.36%雙重影響，致單位產出勞動成本較上年上升 6.94%最為顯著；醫療保健服務業亦因每工時薪資較上年上升 4.95%，及勞動生產力下降 1.07%，致單位產出勞動成本較上年上升 6.09%居次。而金融及保險業因平均每工時薪資上升 3.96%，低於勞動生產力之增幅 4.49%，致單位產出勞動成本較上年下降 0.51%最為顯著；其他服務業因平均每工時薪資上升 0.25%，低於勞動生產力之增幅 0.52%，致單位產出勞動成本較上年下降 0.30%居次。

表 1 全體產業產值勞動生產力與單位產出勞動成本

基期：民國100年=100

單位：%

| | 勞動生產力 (每工時產出) | | 產出 (實質GDP) | | 就業投入 總工時 | | 單位產出 勞動成本 | | 平均每工時 薪資 | |

Summary Analysis

For domestic industrial development, enhancing labor productivity will not only advance sustained economic growth, but also assist in stabilizing commodity prices, reducing production costs, and raising salary level. In view of labor and capital are the main input elements for industries in the operational and production process, research on the trend of labor productivity of domestic industry allows us to comprehend the growth and decline between labor output and input, which also assists in clarifying the influence of capital intensity and technical progress rate on labor productivity.

With respect to research on labor productivity, it is to measure the output obtained from unit labor input, generally expressed by “Total Output / Total Labor Input”, this can be regarded as the indicator for the applied efficiency of various industrial labor input, and for the potential economic output, in which the total output is measured with “Real GDP¹”, i.e. calculated by the concept of output value, while the “Total Employed Hours” is applied on the calculation of total labor input.

In addition, for research of unit labor cost, it is related to measure the labor cost paid by per unit production, usually expressed by “Total Labor Cost / Total Output”, which can be regarded as the indicators of the cost competitiveness input by industries, in which total labor cost is measured by “Total Employed Earnings”, and total output also uses “real GDP”.

In order to observe the change trend of labor productivity and unit labor cost in domestic industries, pursuant to the forgoing description, meaning of these two terms are interpreted with formulation as follows:

$$(1) \text{ Output value labor productivity (hereinafter referred to as "labor productivity") = } \\ \text{real GDP / total employed hours}$$

$$(2) \text{ Unit labor cost = Total employed earnings / real GDP}$$

From the relationship between (1) and (2), we hence lead to

$$(3) \text{ Unit labor cost = (Total employed earnings / total employed hours) / } \\ (\text{real GDP / total employed hours}) \\ = \text{Average earnings per working hour / labor productivity}$$

¹ The real GDP of all industries mentioned in this report is in chained 2011 dollars, and does not include net factor income from the rest of the world, ownership of dwellings, government services and errors. As for its method of calculation, please refer to “Description of Methods Used in Compilation.”

As far as industrial operations are concerned, the changing situation of unit labor costs is an important indicator to observe industrial competitiveness, as shown in equation (3). Therefore, the goal of reducing labor costs and enhancing industrial competitiveness shall be achieved mainly by raising labor productivity.

All Industries

Taiwan is a trade-oriented nation whose overall economic performance is so much under the influence of the global economic situation. Due to the global economic slowdown in 2015 and weakness of international market demand, Taiwan's exports showed a steep decline of 10.9% compared to the previous year (2014). The impact spread across the domestic industries, and that led to decreasing production of manufacturing and weak growth momentum of domestic demand. The annual economic growth rate in 2015 was only 0.65%, the lowest growth since the global financial crisis in 2009, declined by 3.27 percentage points compared to the previous year.

In 2015, the real GDP of all industries annually declined by 0.26%, higher than the 0.17% decline of total employed hours, and thus the labor productivity annually decreased by 0.09%.

As for unit labor costs, since the average earnings per working hour increased by 3.63% and the labor productivity decreased by 0.09%, the unit labor costs of all industries annually increased by 3.73%.

(1) Agriculture, Forestry, Fishing and Animal Husbandry

Due to Taiwan's water shortage and the measures of agricultural water rationing in 2015, the cultivated area became small. Additionally, two typhoons, Soudelor and Dujuan, struck Taiwan and caused severe agricultural losses. Furthermore, infection of domestic poultry with avian influenza in early 2015 caused a drop in production and the annual real GDP of agriculture, forestry, fishing and animal husbandry consequently declined by 3.88%. On the other hand, total employed hours increased by 2.26%, and thus labor productivity annually decline by 6.00%. The average earnings per working hour increased by 1.19% and the labor productivity decreased by 6.00%, and thus the unit labor costs annually increased by 7.66%.

(2) Industry

In 2015, due to the impacts of poor global economic performance, weak international demand, continued destocking of electronic products and the crowding out effects from the expanded supply chain in Mainland China, the growth momentum of domestic production was weak and the real GDP of industrial sector suffered a negative growth of 0.86%, lower than the 0.96% decrease of total employed hours. As a result, labor productivity annually increased by 0.10%. In addition, average earnings per working hour grew by 4.53%, higher than the 0.10% increase of labor productivity, and thus the unit labor costs annually increased by 4.43%.

Based on observations of labor productivity by industry, the real GDP of all industries showed a negative growth. For manufacturing and water supply & remediation activities, since their decrease rates of real GDP were lower than those of total employed hours, both of their labor productivity showed an increase compared to the previous year; while all the other industries suffered a decline. For water supply & remediation activities, the real GDP showed a negative growth of 1.09%, lower than the 2.40% decrease of total employed hours, and thus labor productivity increased by 1.35% ranked as the most significant industry. For manufacturing, reduction in production of steel products, handheld mobile devices and electronic components resulted in a negative real GDP growth of 0.52% due to international competition and the decrease in export orders, lower than the 1.03% decrease of total employed hours. As a result, labor productivity of manufacturing increased by 0.53% ranked as the second significant industry. In addition, production of natural gas and crude petroleum decreased due to the falling prices of crude oil. As a result, the real GDP of mining & quarrying showed a negative growth of 6.44% compared to the previous year; however, since total employed hours increased by 2.79%, labor productivity showed the greatest decline of 8.98%. For electricity & gas supply, the real GDP showed a negative growth of 6.97% due to the decommissioning of old nuclear units and the increase of power generation costs for reducing air pollution and replacing power generation with natural gas and fuel; however, total employed hours increased by 1.98%, and thus labor productivity decreased by 8.77%, ranked as the second worst industry. For construction, the investment momentum of construction projects became weak due to the cooling housing market. As a result, the real GDP showed a negative growth of 1.03%, higher than the 0.69% decrease of total employed hours, and thus labor productivity decreased by 0.33%.

Based on observations of unit labor costs by industry, only water supply & remediation activities showed an annual decrease of 0.40% since average earnings per working hour grew by 0.94%, lower than the 1.35% increase of labor productivity; however, the other industries all showed increases compared to the previous year. For electricity & gas supply, labor productivity decreased by 8.77% and the average earnings per working hour grew by 2.78%, and thus unit labor costs increased by 12.67%, ranked as the most significant industry. For mining & quarrying, labor productivity decreased by 8.98%, higher than the 0.22% decrease of average earnings per working hour, and thus unit labor costs increased by 9.62%, ranked as the second significant industry.

(3) Services

Although the global economies showed weak growth momentum in 2015 and that affected the performance of some industries, the services sector still showed an annual real GDP growth of 0.39%, higher than the 0.19% increase of total employed hours, and thus labor productivity annually increased by 0.19% owing to sound performance of finance & insurance activities, demand for information technology application development and skyrocketing number of inbound visitors. In addition, since the average earnings per working hour increased by 3.21% annually, higher than the 0.19% increase of labor productivity, the unit labor costs increased by 3.01%.

Based on observations of labor productivity by industry, the real GDP of finance & insurance activities showed a growth of 3.54% owing to the increases of revenues from service charges of financial institutions and life insurance premiums; however, total employed hours decreased by 0.91% and thus labor productivity increased by 4.49%, ranked as the best performance industry. Labor productivity of support service activities increased by 2.35%, ranked as the second best performance industry, since its real GDP growth of 3.74% was higher than the 1.35% increase of total employed hours. For professional, scientific & technical activities, labor productivity showed the greatest decrease of 3.36% due to its negative real GDP growth of 2.80% and the 0.58% increase of total employed hours. Real estate activities showed a negative real GDP growth of 2.55% due to the housing market downturn; however, total employed hours increased by 0.26%, and thus labor productivity decreased by 2.80%, ranked as the second worst industry.

Based on observations of unit labor costs by industry, all industries showed an annual increase of average earnings per working hour except real estate activities. The

unit labor costs of professional, scientific & technical activities showed the most significant increase of 6.94% compared to the previous year due to the annual 3.34% increase of average earnings per working hour and the 3.36% annual decrease of labor productivity. The unit labor costs of human health activities also showed an annual increase of 6.09%, ranked as the second significant industry, due to the 4.95% annual increase of average earnings per working hour and the 1.07% annual decrease of labor productivity. In addition, the unit labor costs of finance & insurance activities showed the most significant decrease of 0.51% compared to the previous year due to the 3.96% increase of average earnings per working hour, lower than the 4.49% increase of labor productivity. For other service activities, unit labor costs annually decreased by 0.30%, ranked as the second significant industry, due to the 0.25% increase of average earnings per working hour, lower than the 0.52% increase of labor productivity.

Table 1 Labor Productivity and Unit Labor Costs of All Industries

Base Period: 2011 = 100

Unit: %

| | Labor productivity (Output per hour) | | Output (Real GDP) | | Total employed hours | | Unit labor costs | | Average earnings per working hour | |

伍、編製方法說明

V. DESCRIPTION OF METHODS
USED IN COMPIRATION

編製方法說明

一、理論基礎

生產力的衡量有「平均」與「邊際」兩種方法，惟邊際生產力在統計實務中尚停留在理論階段，故目前所編布的勞動生產力，都是以「總產出」除以「總投入」的平均觀念來編製。

依產值編算之勞動生產力指數，其產出部分係採用國民所得生產帳（NIPA）中之實質國內生產毛額（GDP），而投入部分則採用場所面與家計面兩種調查所得之受僱員工與雇主、自營作業者、無酬家屬工作者之人數、工時等資料，以為編製基礎。其計算公式如下：

$$1.\text{勞動生產力指數} = \frac{\text{實質國內生產毛額指數}}{\text{勞動投入指數(工時} \cdot \text{就業者} \cdot \text{等就業者)}} \times 100$$

(以民國 100 年為基期，產出係以 100 年為參考年計算之國內生產毛額連鎖實質值衡量)

$$2.\text{勞動生產力} = \frac{\text{實質國內生產毛額}}{\text{勞動投入量(工時} \cdot \text{就業者} \cdot \text{等就業者)}}$$

(產出係以 100 年為參考年計算之國內生產毛額連鎖實質值衡量)

二、行業涵蓋範圍

本報告之「全體產業」涵蓋「農林漁牧業」、「工業」、「服務業」。「工業」涵蓋範圍包含「礦業及土石採取業」、「製造業」、「電力及燃氣供應業」、「用水供應及污染整治業」、「營造業」。「服務業」包含「批發及零售業」、「運輸及倉儲業」、「住宿及餐飲業」、「資訊及通訊傳播業」、「金融及保險業」、「不動產業」、「專業、科學及技術服務業」、「支援服務業」、「醫療保健服務業」、「藝術、娛樂及休閒服務業」、「其他服務業」。

其中，「製造業」另依中類分「食品製造業」、「飲料及菸草製造業」、「紡織業」、「成衣及服飾品製造業」、「皮革、毛皮及其製品製造業」、「木竹製品製造業」、「紙漿、紙及紙製品製造業」、「印刷及資料儲存媒體複製業」、「石油及煤製品製造業」、「化學材料製造業」、「化學製品製造業」、「藥品及醫用化學製品製造業」、「橡膠製品製造業」、「塑膠製品製造業」、「非金屬礦物製品製造業」、「基本金屬製造業」、「金屬製品製造業」、「電子零組件製造業」、「電腦、電子產品及光學製品製造業」、「電力設備製造業」、「機械設備製造業」、「汽車及其零件製造業」、「其他運輸工具及其零件製造業」、「家具製造業」、「其他製造業」。

由於「教育服務業」及「社會工作服務業」所運用之產出、投入資料涵蓋範圍不盡相同，為考量兩者間一致性，故不納入統計。另外，「製造業」中類「產業用機械設備維修及安裝業」配合產出資料併入「其他製造業」編製。

三、產出的衡量

為排除物價波動對產出之影響，依產值編製之勞動生產力指數，是以國民所得「生產」帳（NIPA）中的實質國內生產毛額（GDP）為衡量產出的基礎。但由於生產帳中部分納入國內生產毛額組成項，因找不到適當的勞動投入，如住宅服務、公共行政及國防；強制性社會安全、加值型營業稅、進口稅及統計差異等，故不計入產出衡量中。

(一)住宅服務：

係住家用的房屋，其出租或自住的租金部分。此項產出無適當的勞動投入與之配合，自不應包括在產出範圍內。

(二)公共行政及國防；強制性社會安全：

包括凡從事一般公共服務及國家防衛等行政、國防機構及受政府監督指揮且具非市場性之非營利機構。公共行政及國防；強制性社會安全生產毛額等於其固定資本消耗、受僱人員報酬及生產及進口稅之支出，資料係依據各機構預決算書編算，此行業亦未有適當的勞動投入，故排除勞動生產力所編製之範圍。

(三)加值型營業稅：

係對事業單位銷售物品及勞務之營業額，扣除自其他納稅單位購進物品及勞務之支出，以其餘額「加值」的部分課徵之租稅。本項加值型營業稅係單獨列計，故不納入編算。

(四)進口稅：

係指關稅、商港建設費與進口貨物稅等。此因新的國民經濟會計制度修改為單獨列帳，不再併計各產業帳內，目前無適當之方法可併入各行業中，故在各行業中不計入此項。

(五)統計差異：

由於國民所得在生產面、支出面及所得面統計有三面等價的概念，在實務甚難達成，主因 GDP 的編算資料來源龐雜，其中之調查誤差或統計缺漏難以避免，導致各面編算結果存在統計差異，因無法納入各業中，故予以排除。

四、勞動投入的衡量

(一)工時：

就常理言，勞動工時的投入比就業人數投入的變動，更能反應生產力的變動，而此一勞動工時應指工作工時而非有酬工時。由於產出資料係採用國內生產毛額，是以勞動的投入應為就業者的工作工時（即除了受僱員工的延人工時之外，尚包括雇主、自營工作者、及無酬家屬工作者的延人工時），較能符合生產力分析之要求。

本總處現有由住戶面調查（即人力資源調查）所產生之就業者人數資料，此為研究就業人數結構的常用指標，但考慮工時反應生產力變動之準確性，則應用本總處由場所

面調查（即受僱員工薪資調查）所產生之受僱員工工時資料，較能反應生產力之變動，因此，本統計目前衡量投入面時，係採用人力資源統計中的就業人數（即雇主、自營作業者、受僱者、及無酬家屬工作者等），配以受僱員工統計中之工時，並經下列公式調整後應用。

1. 調整前非農業勞動力雇主（受僱者、無酬家屬工作者、自營作業者）的工時 ×

$$\frac{\text{受僱員工的工時}}{\text{勞動力受僱者的工時}} = \text{調整後非農業雇主（受僱者、無酬家屬工作者、自營作業者）的工時}。$$

2. 調整前每週農業雇主（受僱者、無酬家屬工作者、自營作業者）的工時 ÷ 7 × 當月日數 = 調整後每月農業雇主（受僱者、無酬家屬工作者、自營作業者）的工時。

(二) 就業者：

有鑑於部分國家，至今仍沿用較簡單的「每就業者產出」來衡量勞動生產力的變動，故本報告亦將「每就業者產出」（就業者計包括有家計面之雇主、自營作業者、及無酬家屬工作者，與受僱者）列出，以供應用及便於國際比較。

(三) 等就業者：

為將不同工時的勞動投入，化為同一工作時數的就業者，故予以標準化為「等就業者」，其標準化的過程如下：

1. 依人力資源調查計算各業全日工作者之平均工時（ NH ）。

2. 依人力資源調查分別計算各從業身分別之平均工時，自營作業者（ AH_1 ），雇主（ AH_2 ），受僱者（ AH_3 ），無酬家屬工作者（ AH_4 ）。

3. 求各從業身分別等就業者之比例，即 $R_i = \frac{AH_i}{NH}, i = 1, 2, 3, 4$ 。

4. 以 R_i 乘就業者人數（ E_i ）（受僱者採受僱員工資料），即為各從業身分之等就業者（ E'_i ），

$$E'_i = R_i \times E_i$$

$$5. \text{各業別等就業者 } E' = \sum_{i=1}^4 E'_i$$

五、單位產出勞動成本

「單位產出勞動成本」主要在反映廠商勞動成本的變動，其衡量方法是以總薪資指數除以產出（實質國內生產毛額）指數而求得。即

$$\text{單位產出勞動成本指數} = \frac{\text{總薪資指數}}{\text{實質國內生產毛額指數}} \times 100$$

（以民國 100 年為基期，產出係以 100 年為參考年計算之國內生產毛額連鎖實質值衡量）

當單位產出勞動成本指數上升時，表示相同單位的產出需要支付較多的勞動成本，或廠商支付相同的成本，唯生產的產出卻減少。上式中的總薪資指數因雇主、自營作業者、無酬

家屬工作者，並沒有薪資報酬，所以總薪資指數係以受僱員工之人數乘以其平均每人之薪資，再加上非受僱員工就業者（包含雇主、自營作業者、無酬家屬工作者）設算總薪資，然後再以民國 100 年為基期得到。

非受僱員工就業者總薪資設算公式如下：

$$\text{非受僱員工就業者設算總薪資} = \frac{\text{非受僱員工就業者平均工時}}{\text{受僱員工平均工時}} \times \text{受僱員工每人平均薪資}$$

$$\times \text{非受僱員工就業者人數}$$

而各月農業部門之平均每人薪資，則以下列方法重新估計：

$$1. \text{ 調整後農業平均薪資 } (M_t) = \text{農業受僱就業者平均每月主要工作收入(5 月)}$$

$$\times \frac{\text{非農業受僱員工平均薪資(5月)}}{\text{非農業受僱就業者平均每月主要工作收入(5月)}} \text{。}$$

$$2. \text{ 基期 (100 年 5 月) 農業平均薪資 } M_t' = \frac{M_{t-1} + M_t + M_{t+1}}{3} \text{。}$$

$$3. \text{ 重估後之各月農業平均薪資} = \text{基期農業平均薪資 } M_t'$$

$$\times \text{農民所付物價指數—僱用工資類。}$$

※非農業與農業之受僱就業者平均每月主要收入係取自行政院主計總處之「人力運用調查報告」。

※農民所付物價指數—僱用工資類係取自行政院農業委員會之「農業統計月報」。

Compilation Method

I. Theoretical Foundation

Productivity can be measured in terms of "average productivity" and "marginal productivity". In practice, the marginal productivity is still at the stage of theoretical discussion only. The present labor productivity statistics are all calculated by dividing "total input" into "total output".

For labor productivity derived from production value-added, the part of output refers to the real gross domestic product (GDP) obtained from the national income production account (NIPA) while the part of input is computed on the basis of the number of persons and working hours of employees, employers, own-account workers, and unpaid family workers, with data obtained from establishment and household surveys. The calculation formulas are shown as follows:

(1) Labor Productivity Index

$$= \frac{\text{Real GDP Index}}{\text{Labor Input Index (working hours} \cdot \text{employed persons} \cdot \text{equi-employed persons})} \times 100$$

(The base year of the indexes is 2011 and output is real GDP in chained 2011 dollars.)

(2) Labor Productivity

$$= \frac{\text{Real GDP}}{\text{Labor Input (working hours} \cdot \text{employed persons} \cdot \text{equi-employed persons})}$$

(Output is real GDP in chained 2011 dollars.)

II. Industry Scope

"All industries" mentioned in this report include three sectors, such as "Agriculture, Forestry, Fishing & Animal Husbandry Sector", "Industrial Sector" and "Services Sectors". "Industrial Sector" covers 5 section industries, such as "Mining & Quarrying", "Manufacturing", "Electricity & Gas Supply", "Water Supply & Remediation Activities" and "Construction". "Services Sector" covers 11 section industries, such as "Wholesale & Retail Trade", "Transportation & Storage", "Accommodation & Food Service Activities", "Information & Communication", "Financial & Insurance Activities", "Real Estate Activities", "Professional, Scientific & Technical Activities", "Support Service Activities", "Human Health Activities", "Arts, Entertainment & Recreation" and "Other Service Activities".

Furthermore, "Manufacturing" covers 25 division industries, such as "Manufacture of Food Products", "Manufacture of Beverages & Tobacco Products", "Manufacture of Textiles", "Manufacture of Wearing Apparel & Clothing Accessories", "Manufacture of Leather, Fur & Related Products", "Manufacture of Wood & of Products of Wood & Bamboo", "Manufacture of Paper & Paper Products", "Printing & Reproduction of Recorded Media", "Manufacture of Petroleum & Coal Products", "Manufacture of Chemical Material", "Manufacture of Chemical Products", "Manufacture of Pharmaceuticals & Medicinal Chemical Products", "Manufacture of Rubber Products", "Manufacture of Plastics Products", "Manufacture of Other Non-metallic Mineral Products", "Manufacture of Basic Metals", "Manufacture of Fabricated Metal Products", "Manufacture of Electronic Parts & Components",

"Manufacture of Computers, Electronic & Optical Products", "Manufacture of Electrical Equipment", "Manufacture of Machinery & Equipment", "Manufacture of Motor Vehicles & Parts", "Manufacture of Other Transport Equipment & Parts", "Manufacture of Furniture" and "Other Manufacturing".

Since the coverages of output are different from those of input in "Education" and "Social Work Activities", these two industries are excluded in statistical results of this report for consistency. Besides, "Other Manufacturing" includes "Repair & Installation of Industrial Machinery & Equipment" in line with the coverage of output.

III. Output

In order to eliminate the effects of price fluctuation, the labor productivity index computed from production value should have been based on the real GDP derived from the NIPA. Since some items of the NIPA, such as ownership of dwellings, public administration & defence; compulsory social security, value-added tax, import duties and statistical discrepancy, are included in the components of the GDP and they cannot find their counterpart items of labor input, thus these items are not included in the output for measuring productivity.

1. Ownership of Dwellings

This item refers to the rent for a house which is either leased or used by the owner himself. This item of output has no counterpart item of labor input and is accordingly excluded from the scope of output.

2. Public Administration & Defence; Compulsory Social Security

This item refers to the administration of general public services, national defence and so forth, defence institutions and non-market non-profit institutions. This item of output is measured according to the settlement statement of all government agencies, and its amount of output equals to the expenses of consumption of fixed capital, compensation of employees and taxes on production and imports. This item of output also has no counterpart item of labor input and is excluded from the scope of output.

3. Value-Added Tax

This tax only applies to the added value, which is defined as all sales amounts of goods and services of a business entity after the deduction of expenses relating to the goods and services that were purchased from other taxable entity. Since value-added tax is no longer included in the output of every industry, thus this item is accordingly excluded from the scope of output.

4. Import Duties

This item comprises customs duties, harbor construction dues, import commodity duties and so forth. Because of some revision in the System of National Accounts (SNA), this item is no longer included in the output of every industry. Nowadays, there is no appropriate method used to include, and thus this item is excluded from the output of every industry.

5. Statistical Discrepancy

Although there is a conceptual consistency between three measures of GDP, such as output measure, expenditure measure and income measure, however these three measures often differ in practice. This is

because of the wide disparity of data sources that must be called on and the fact that any error in any source will lead to a difference between at least two of the GDP measures. It is inevitable that many such data errors will exist and will become apparent in exercises. Since statistical discrepancy is not included in the output of every industry, thus this item is accordingly excluded from the scope of output.

IV. Labor Input

1. Working Hours

Generally, the change in working hours is a better input to show the movement of productivity than the change in the employed persons. The working hours should refer to the time used to do a job, rather than just the working time with pay. Because the GDP is used as the output data, the labor input should be the working hours dedicated by the employed persons (including not only man-hours of employees but man-hours of employers, own-account workers and unpaid family workers). The results produced in this way will then be able to meet the needs required in the analysis on productivity.

Currently, the DGBAS has collected data on employed persons and working hours obtained from household surveys. However, statistics on working hours of employees obtained from establishment surveys should be able to reflect the movement of productivity more accurately. Consequently, the labor in this case includes non-agricultural employees, employers, own-account workers and unpaid family workers obtained from Manpower Survey. The labor input, with adjusted working hours obtained from Employees' Earnings Survey, is calculated on the basis of the following formulas:

(1) Prior adjusted working hours of non-agricultural employed persons

(including employers, employees, unpaid family workers and own-account workers) ×

$$\frac{\text{Working hours of employees}}{\text{Working hours of employed persons in labor force}}$$

=Adjusted working hours of non-agricultural employed persons.

(2) Prior adjusted weekly working hours of agricultural employed persons

(including employers, employees, unpaid family workers and own-account workers) ÷ 7 ×

the number of days of the current month

=Adjusted monthly working hours of agricultural employed persons.

2. Employed Persons

In view of the fact that some countries are still using the simpler indicator "output per employed person" to measure the movement of labor productivity, this report also present this indicator for readers to use in their own applications and make the international comparison. (The employed persons herein include employees, employers, own-account workers and unpaid family workers obtained from household surveys).

3. Equi-employed Persons

In order to transfer the employed persons of different working hours into the standard employment, the so-called "equi-employed persons", some standardization must be proceeded for employed persons. The standardized steps are shown as follows:

- (1) Compute the average working hours of full-time workers (NH) from Manpower Survey.
- (2) Compute the average working hours for each class of employed persons from Manpower Survey, for example, own-account workers (AH_1), employers (AH_2), employees (AH_3) and unpaid family workers (AH_4).

- (3) Compute the ratio for each class of equi-employed persons; that is,

$$R_i = \frac{AH_i}{NH}, \quad i = 1, 2, 3, 4.$$

- (4) Multiply the ratio R_i by each class of employed persons E_i (the data of employees obtained from Employees' Earnings Survey) to derive the number of equi-employed persons E'_i , $E'_i = R_i \times E_i$.

- (5) The number of equi-employed persons for each industry is E' , $E' = \sum_{i=1}^4 E'_i$.

V. Unit Labor Costs

The "unit labor costs" are mainly designed to indicate the movement of production costs of the business firms. It is calculated by dividing the output (real GDP) index into the total earnings index. The formula is shown as follows:

$$\text{Unit Labor Costs Index} = \frac{\text{Total Earnings Index}}{\text{Real GDP Index}} \times 100$$

(The base year of the indexes is 2011 and output is real GDP in chained 2011 dollars.)

An increase in the unit labor costs index indicates that more labor costs should be paid to produce a unit of output, or that the same amount of labor costs can produce less amount of output. As employers, own-account workers and unpaid family workers do not get paid, the total earnings index in the above formula, given the base year of 2011, is derived from multiplying the average earnings of employees by the number of employees, and then adding total imputed earnings of non-employees (including employers, own-account workers and unpaid family workers). Total earnings of non-employees are imputed by the following method:

$$\begin{aligned} & \text{Total imputed earnings of employed persons of non-employees} \\ &= \frac{\text{Average working hours of non-employees}}{\text{Average working hours of employees}} \\ &\quad \times \text{Average earnings of employees} \\ &\quad \times \text{Number of non-employees}. \end{aligned}$$

Besides, the average monthly earnings of employees in the agricultural sector are re-estimated as follows:

1. Adjusted average monthly earnings of agricultural employees (M_t)

$$\begin{aligned} &= \text{Average monthly income of major job for agricultural employees (in May)} \\ &\times \frac{\text{Average monthly earnings of non-agricultural employees (in May)}}{\text{Average monthly income of major job for non-agricultural employees (in May)}} \end{aligned}$$

2. Average monthly earnings of agricultural employees for base period (May, 2011)

$$M'_t = \frac{M_{t-1} + M_t + M_{t+1}}{3}$$

3. Re-estimated average monthly earnings of agricultural employees

$$\begin{aligned} &= \text{Average monthly earnings of agricultural employees for base period } (M'_t) \\ &\times \text{Index of price paid for wage by farmers.} \end{aligned}$$

Note:

※The source of "Average Earnings of Agricultural and Non-agricultural Employees" are "*Report on the Manpower Utilization Survey*" published by the Directorate-general of Budget, Accounting and Statistics, Executive Yuan.

※The source of "Index of Price Paid for Wage by Farmers" is "*Monthly Bulletin of Agricultural Statistics*" published by the Council of Agriculture, Executive Yuan.
