

GDP: Preliminary Estimate for 2021Q2, and Outlook for 2021-22

August 13, 2021 According to the preliminary estimate, Taiwan's real gross domestic product (GDP) increased by 7.43% in 2021Q2, compared to the same period of the previous year, and the growth rate of 2021Q1 has been revised to 9.27%. Besides, the real GDP is predicted to grow 5.88% and 3.69% in 2021 and 2022, respectively.

Preliminary Estimate of Real GDP in 2021Q2

The real GDP contracted by 4.21% on a quarter-on-quarter, seasonally-adjusted annualized basis (saar), or increased by 7.43% on a year-on-year basis (yoy, same as below) in 2021Q2, 0.04 percentage point lower than the advance estimate.

Meanwhile, the economic growth rate of 2021Q1 has been revised to 9.27% (formerly 8.92%).

Real private final consumption fell by 0.41% in 2021Q2, a reversal from the 2.27% growth in the previous quarter, mainly reflecting a slump in consumption expenditure caused by COVID-19 local outbreaks. Nationwide Level 3 epidemic alert from mid-May led to the contraction in service consumptions such as restaurants and hotels, public transportations, as well as some commodity consumptions such as cars and clothing. Online shopping, delivery services, and other equipment expenditures for work/study-from-home partly offset the decline.

Regarding gross capital formation, investment in machinery equipment, transportation equipment and construction grew significantly. Combining inventory changes, real gross capital formation expanded by 8.56%.

In addition, real exports of goods and services grew by 22.62%, mainly driven by the strong foreign demand for electronic parts and ICT products, as well as the significant growth of traditional products, such as steel, chemistry product. Imports also increased by 17.46%.

On the production side, the manufacturing sector grew by 16.38% in 2021Q2, following the 15.87% increase in the previous quarter, mainly due to the output expansion of semiconductor, fabricated metal products, and machinery & equipment.

The wholesale & retail trade sector and the financial & insurance sector increased by 5.96% and 12.73% respectively, after the expansion of 11.64% and 10.47% growth in

the previous quarter.

Despite of a sharp decline of passengers transportation caused by COVID-19 pandemic, however, the freight transportation increased with the growth of manufacturing, the transportation and storage sector grew by 1.52%, following the 4.99% decline in the previous quarter.

Forecast for 2021

The capacity expansion brought by the massive investment of semiconductor manufacturers and reshoring oversea companies timely respond to digitalization and remote demand spurred by the pandemic, and emerging demand for new technological applications, such as 5G, automotive electronics, high performance computing (HPC) and internet of things (IOT). As well as the traditional commodities rebound associated with the recovering global economy, both will support Taiwan's export in the second half of 2021. Although few of factories suspends temporarily due to the pandemic, Taiwan's manufacturing activities are almost unaffected. It is expected for real exports of goods and services to grow by 17.93% in 2021.

As COVID-19 local pandemic is controlled, consumer spending will pick up amid restrictions easing and the introducing of government's relief and stimulus measures. Real private consumption is expected to grow by 1.36%, mainly owing to the impact of local pandemic on spending, due to banning social gathering and other COVID-19 control restrictions, while partly offset by the emerging of the touchless service.

Real private fixed capital formation is anticipated to grow by 11.89%. In addition to the accelerating investment of semiconductor industry and the reshoring Taiwan's overseas companies, it is also driven by the 5G infrastructure, offshore wind energy, as well as airline companies and container shipping companies expanding fleet capacity.

Combining the above components as well as the public sector, Taiwan's real GDP is projected to grow by 5.88% in 2021, upward revised by 0.42 percentage point from the previous forecast.

Consumer price Index (CPI) will increase 1.74%, upward revised by 0.02 percentage point, mainly reflecting the raising gasoline and food prices.

Outlook for 2022

The global economy will keep growing, and the world trade volume is projected to continue growing by 7.0% in 2022, according to International Monetary Fund (IMF). Moreover, enlarging domestic production capacity, spurred by the supply chain of semiconductor industry and reshoring companies, will support Taiwan's export and investment growth. Combining the contribution from domestic sector, with the recovering consumption, real GDP will grow by 3.69% in 2022. CPI will gently rise by 0.89%.

Explanation: Contributions of component X on s season at t year= $\{P_{X,t-1}/P_{GDP,t-1} \times (rX_{t,s} - rX_{t-1,s})/rGDP_{t-1,s} + (rX_{t-1,s}/rGDP_{t-1,s} - rX_{t-1,t-1}/rGDP_{t-1,t-1}) \times (P_{X,t-1}/P_{GDP,t-1} - P_{X,t-2}/P_{GDP,t-2})\} \times 100\%$,
where rX : Chained dollar of component X ; rGDP : real GDP(reference year = 2016) ; P_x : Deflators of component X ; P_{GDP} : Deflators of GDP.

Explanation: Contributions of component X on s season at t year= $\{P_{X,t-1}/P_{GDP,t-1} \times (rX_{t,s} - rX_{t-1,s})/rGDP_{t-1,s} + (rX_{t-1,s}/rGDP_{t-1,s} - rX_{t-1,s}/rGDP_{t-1,s}) \times (P_{X,t-1}/P_{GDP,t-1} - P_{X,t-2}/P_{GDP,t-2})\} \times 100\%$, where rX : Chained dollar of component X ; rGDP : real GDP(reference year = 2016) ; P_X : Deflators of component X ; P_{GDP} : Deflators of GDP.

Note: (1) Real Estate and Ownership of Dwellings consists of real estate development, operation, related activities and dwellings services. The dwellings services (including those rental and owner-occupied imputed) accounted for over 80% of total real estate and dwellings services.

(2) Include accommodation and food services, professional, scientific and technical services, support services, education, human health and social work services, arts, entertainment and recreation, other services, import duties and value-added tax.

Explanation: 1. Gross National Savings(A)=GDP+Net Factor Income from the Rest of the World(E)+Net Transfers from the Rest of the World(F)-Private Final Consumption-Government Final Consumption.

2. Gross Domestic Investment(B)=Gross Fixed Capital Formation+Changes in Inventories.

3. Difference between Savings and Investment(C)=A-B=(GDP+E+F-Private Final Consumption-Government Final Consumption)-(Gross Fixed Capital Formation+Changes in Inventories)=(Exports of Goods and Services-Imports of Goods and Services)+E+F=External Balance of Goods and Services+Net Factor Income from the Rest of the World+Net Transfers from the Rest of the World; in practice, statistical discrepancy could exist between C and D+E+F, because of the difference between the GDP results derived from production and expenditures.

Note : 1. Total monthly earnings of all employees are the total of regular(basic salary,monthly bonus,fixed subsidy and good attendance reward) and irregular(over-time, annul bonus,flexible bonus not paid by month) earnings of employees on payroll,but exclude the non-working reward such as insurance and pension.
2. Number of employees at the end of this month = Number of employees at the end of last month + Number of accession in this month - Number of separation in this month. However, the formula above does not apply on annual average data since the annual employees number is mean of a year not the number at the end of a year.
3. Both Industry & Services and Services Sectors statistics has covered educational support activities & other education in Education Industry since 2009, and has covered Scientific Research & Development, Pre-primary Education in Education Industry, and Social Work Activities since January 2019. Due to the change in scope of industry coverage, 2018-2019 changes and change rates were not shown.

Explanation : 1. Per capita income is calculated as the ratio of per capita income of first quintile to per capita income of fifth quintile. All the population ranked in ascending order of per capita income is divided in to five quintiles. Per capita income is calculated as household income divided by household size(or the square root of household size) .
 2. The figures of income inequality measured by per capita income is lower than per household income.

Table 14 The Change of Disposable Income per Household Occurred by Current Transfers between Households and Government

Unit:NT\$,%

Year	Household Income Without Current Transfer From Government		Household Current Transfer Income From Government	Household Income Including Current Transfer Income From Government		Household With Current Transfers Income to Government		Disposable Income			Ratio Difference

Explanation: The higher Gini's concentration coefficient, the more serious the inequality of income distribution.

Note: The data presents official releases of above countries. The comparison should be made cautiously for the difference of income definition. For example, Taiwan is disposable income from all households. U.S. (a) is income from all households after accounting for government cash benefits and taxes, the year of 2007 and before is including capital gains and non-cash transfers, the years of 2008 and 2009 is excluding capital gains. U.S. (b) is income before tax including government cash transfers, but excluding capital gains and non-cash transfers. Japan (a) is yearly income (before tax), and not incorporated with farm households till 1999, not with single households till 2002, Japan (b) is per capita disposable income for all households. South Korea (a) is per capita disposable income for the urban area households (1-person households and farm households are excluded), South Korea (b) is per capita disposable income for all households (farm households are excluded), South Korea (c) is per capita disposable income for all households. Singapore (a) for all households, Singapore (b) and (c) for employed households, all including income from work, (a) and (b) are before accounting for government benefits and taxes, hence having higher ratios and coefficient, (c) is after that. The data of Hong Kong compute on post-tax household income and publish the report every five years.

Source: Japan: (a) Family income and expenditure survey, (b) National Survey of Family Income and Expenditure. South Korea: (a) (b) Annual Report on the Household Income and Expenditure Survey, (c) Survey of Household Finances and Living Conditions. U.S.: is from Current Population Survey Annual Social and Economic Supplements (CPS ASEC), (a) "Effects of Taxes and Transfers on Income and Poverty", (b) "Income, Poverty, and Health Insurance Coverage in the United States". Singapore: (a) General Household Survey, (b) (c) Data for the year of 2000 and 2010 and 2020 is from the Census of Population; for the year of 2005 is from General Household Survey; for the year of 2001-2004 · 2006-2009 · 2011-2019 is from Labour Force Survey. Hong Kong: 2016 Population By-census, Thematic Report: Household Income Distribution in HK.

Explanation : 1 pin \approx 3.31 square meters.

Note : ① Concerning housing tenure, before 2010, the term "self-owned" means owned by household members and their lineal relatives. From 2010, the meaning is amended to owned by household members who usually live in this house in accordance with the definition of 2010 Population and Housing Census.

Table 17 Government Social Transfers In Kind Effect on Income Distribution, by Income Quintile
